Shaqraa, Saudi Arabia

SUMMARY

Full-stack developer specializing in .NET applications, delivering secure, scalable solutions with a strong focus on clean architecture and cloud-native development. Experienced in building production-grade APIs, authentication systems, and cloud-based architectures using MongoDB Atlas, MySQL, Docker, and Kubernetes. Comfortable across the stack with Blazor and Next.js and continuously improving through real freelance projects and hands-on simulations.

EXPERIENCE

Full-Stack Developer

04/2025 - 06/2026

IO Center

- Architected a scalable microservices-based learning platform using "BFF + API Gateway", enabling clean separation between frontend orchestration and domain services
- Implemented service-to-service communication and async messaging (RabbitMQ).
- Running containerized services in production.
- Handling logs, metrics, and performance issues.
- Scaling microservices.
- Managing secrets and environment configs.
- Designed domain-driven services for "Enrollment, Progress Tracking, and Policy-based Access Control", ensuring flexibility across subscription models (course purchase vs platform subscription)
- Implemented event-driven architecture (asynchronous messaging) to propagate state changes between services, reducing tight coupling and improving system resilience
- Built a "policy evaluation layer" for runtime access decisions instead of hard-coded authorization logic
- Developed SSR-enabled frontend using "Next.js", improving initial load performance and SEO for public-facing pages
- Introduced "Redis caching strategy" for read-heavy endpoints, reducing response latency and backend load by 40%.
- Containerized services with Docker and structured deployment pipelines targeting "cloud environments (AWS/Azure)"

Collaborated directly with stakeholders to align technical architecture with product requirements and scalability goals

Full-Stack Engineer

06/2026 - Present

Freelancer

- Designed and developed full-stack web applications using ASP.NET Core and Blazor with component-based architecture.
- Designed secure authentication flow using JWT + role-based authorization.
- Integrated MongoDB Atlas and MySQL databases, including schema design, data seeding, and query optimization.
- Improved application performance through debugging, profiling, and refactoring critical backend components.
- Built reusable Blazor components reducing UI duplication by 40%.

EDUCATION

Information Technology

10/2024

UNIVERSITY OF SCIENCE & APPLIED STUDIES - B.Sc. (Honours)

Graduated with First Class Honors.

CERTIFICATES

Full-Stack Developer ↗ Microsoft	
Project Management Professional Certificate ↗ Google	
IBM IT Support ↗ IBM	Present

SKILLS

Backend: ASP.NET Core, C#, REST APIs, MongoDB, MySQL	Frontend: Blazor, React/Next.js, Tailwind
DevOps: containerization (Docker), Kubernetes, CI/CD, Azure	Other: Redis, Agile, Performance & Optimization, Debugging & Profiling

LANGUAGES

Arabic	Native	English	Fluent
